

SageTracker Personal: Smaller, Faster, Smarter

ST Personal is a unique GPS tracking unit that combines a compact design with several intuitive functions. A rechargeable internal battery, on-board reporting options and geofencing functions all make the device ideal for a variety of tracking solutions. With the ability to provide accurate, real time tracking information on any subject's location, you gain the peace of mind that your assets and loved ones are always safe and secure. Now you can instantly track, locate, and communicate with the device's end-user all with the push of a button.

Customized Options, Compact Functions

SageTracker Personal is roughly the size of an average cell phone, and can be easily carried in a pocket or left in a concealed location. The unit is designed to report at intervals as fast as up to 30-seconds, and report timing can be altered at the push of a button. Additionally, the end-user can instantly send an "alert" notification back to the owner in case of an emergency, which includes the user's exact location.

The extended-life battery can be recharged via USB cable connected to any PC. Operating on an internal motion sensor, SageTracker Personal shut down when idle to conserve battery power. This feature provides for hours of uninterrupted location reporting without the added cost or stress of constant battery replacements. Plus, you can conveniently monitor the device's remaining battery life online so you know when the unit needs to be recharged.

SageTracker also gives you the ability to manage and oversee where your device is traveling at all times. On-board buttons can be used to instantly establish an electronic "geo-fence" which will then notify you when the tracker enters or exits a specific area.

Essential features:

- Portable, Hand Held Size
- Fully Rechargeable Battery
- No Installation Required
- Adjustable Reporting Rates up to 30-sec.
- On-board Panic/ Alert Button
- Quad-band Communication
- SMS and GPRS Reporting
